

## **Goliath End of Line Automation Scissor Lifts**

### **Single scissor lift table:**

Most manufactured and used scissor lift table is of the type single scissor.

This lift table is used in a variety of workplaces and can be placed either in door or out door. It can be mounted directly on the floor or in a pit making the platform level with the floor.

All scissor lift tables can be modified and delivered with extra equipment for even more flexibility.

### **Super Low Scissor Lift Table:**

Using a Super low scissor lift table from Goliath allows the user to load the lift table by the use of a pallet truck without having to build the lift table in a pit.

The low collapsed height of 85 mm means that a pallet can be loaded directly by pallet truck by driving in between the scissors (U-shape)

The U-shape lift table is constructed so that most types of pallet trucks can drive in the opening and the U-shape of the platform suits standard EU (euro) pallets perfectly.

All lift tables of super low type are delivered with a freestanding separate motor & hydraulic pump with build-in control box on a stick. The lift tables are tried and tested by Goliath before delivery and are ready to use when connected to the mains.

Every scissor lift table from Goliath is CE marked and conforms to directive EN1570.
